Endowed Professorships

Holders of endowed chairs represent the most distinguished scholars of their generation, combining inspirational scholarship and teaching with service to the School of Engineering and to Stanford.
Endowed Professorships

Endowed professorships are the highest honor the university can bestow on its faculty. Chair holders embody all that we value as a university—excellence, innovation, education, and service.

Stanford Engineering uses the endowment to generate income to guarantee the professor’s salary. This structure acknowledges the accomplishments of a deserving faculty member by honoring them with a named chair while freeing funds for other purposes, such as to attract top young faculty to Stanford.

Endowed chairs help ensure Stanford Engineering’s continued excellence and leadership by providing financial stability to the university and the school. The donors who make this possible are an elite group of Stanford’s most visionary and generous friends.

An endowed professorship can be established with a gift of $4 million.

• The holder of the professorship will be recognized with a title designated in your honor or in another name of your choosing.
• The annual payout from this fund will provide the majority of the salary and benefits for the recipient in perpetuity.
• The dean will host an event to celebrate the establishment of your professorship and the appointment of the chair holder.
• The professor will update you on their research, teaching and other scholarly endeavors.
• You will receive an annual financial report detailing the fund’s performance.
• You will become a lifetime member of the Dean’s Circle, receiving an invitation to an annual event where you can interact with peers, faculty and students while learning about the school’s latest achievements and challenges.
• You will be recognized on Stanford’s professorship website: professorships.stanford.edu

We are fortunate to count among our faculty many luminaries whose excellence sets them apart. These individuals help make Stanford Engineering one of the truly great technical institutions in the world.
